## 3. AI Threat Intelligence & Recommended Mitigations

**Incident Analysis: Denial of Service (DoS) (Source: 127.0.0.1)**
[AI Sentinel Incident Analysis Report]

Executive Verdict: CRITICAL threat incident detected from `127.0.0.1` targeting `127.0.0.1`. Calculated Threat Risk Score: 100.0/100.

MITRE ATT&CK; Mapping: `T1498 - Network Denial of Service` (Tactic: Impact)

Threat Description: High-volume connection flood or protocol exploitation targeted at depleting host/network state buffers.

Investigative Evidence:
- Alert Classification: Denial of Service (DoS)
- Destination Port: 8002 (TCP)
- Response Action Taken: `SCAN_AND_AI`
- Host Fingerprinting (Bounded Nmap): None detected or scan skipped.

Potential Business Impact: Service degradation or complete unresponsiveness of web and API services.

Recommended Immediate Response Actions:
1. Deploy upstream rate-limiting or SYN cookies (sysctl -w net.ipv4.tcp_syncookies=1).
2. Null-route or block the offending IP address in perimeter firewall.
3. Activate DDoS mitigation proxy (Cloudflare/AWS Shield).
