SENTINELIDS INCIDENT REPORT

HIGH RISK INCIDENT

AI-Powered Intrusion Detection & Threat Analysis

Field	Value
Timestamp	20 Sep 2026 • 10:18:07 AM
Source IP	192.168.0.111
Target IP	192.168.0.109
Protocol	TCP
Severity	HIGH
Risk Score	85
Decision Action	SCAN

2. Attack Overview

Field	Value
Attack Type	Reconnaissance – Port Scanning
Severity	HIGH
Risk Score	85

3. MITRE ATT&CK; Mapping

MITRE Field	Value
Technique ID	T1046
Technique Name	Network Service Scanning
Tactic	Discovery

4. Network Traffic Analysis

Traffic Field	Value
Source IP	192.168.0.111

Target IP	192.168.0.109
Protocol	TCP
Detected Signatures	HIGH_PACKET_RATE, HIGH_FORWARD_RATE, PORT_SCAN

5. Nmap Scan Analysis

Scan Result	Value
Host Status	up
Detected Services	ftp, ssh, telnet, smtp, domain, http, pop3, rpcbind, msrpc, netbios-ssn, imap, https

Security Observation

All services reported as filtered, indicating active firewall/IDS protection but confirming scanning activity

6. Indicators of Compromise

IOC Type	Value
Source IP	192.168.0.111
Target IP	192.168.0.109
Signature	PORT_SCAN
Protocol	TCP

7. Impact Analysis

The activity represents a reconnaissance phase; no direct compromise observed. However, the high volume of scans could trigger rate limits, potentially disrupt legitimate traffic, and may precede exploitation attempts if vulnerabilities are discovered.

9. SOC Conclusion

The incident reflects a high■severity internal reconnaissance attempt. Immediate containment via IP blocking and enhanced monitoring is recommended, coupled with proactive vulnerability management to mitigate potential exploitation. Continuous vigilance is essential to detect any escalation from reconnaissance to active compromise.
